

EXPERIENCE

Senior Platform Engineer - Anatomy Financial

June 2026 – Current

San Francisco, CA (Remote)

Software Engineer - Sweetspot

July 2025 – April 2026

New York, NY (Hybrid) - Early engineering hire at a seed-stage startup

- Built core product capabilities for an AI-native government contracting platform spanning agent workflows, retrieval, document understanding, and chat
- Designed and shipped an AI spreadsheet agent for form-oriented workflows over user-uploaded office (Excel) documents
- Created the chat sub-agent architecture linking organization-wide and project-scoped workflows, improving context isolation, recall, and extensibility
- Reworked chat citation and grounding infrastructure to support files, images, and web sources with source-aware rendering, improving traceability and user trust in responses
- Improved search and retrieval infrastructure across opportunity and user-file workflows, raising data quality, retrieval coverage, and system scalability

DevOps Engineer - Anatomy Financial

October 2024 – July 2025

San Francisco, CA (Remote) - Early engineering hire at a Series A startup

- Improved product quality by streamlining platform release candidate workflows, improving developer tooling and experience, and refining CI/CD pipelines
- Driving culture shift of designing robust, observable, and fault-tolerant software via migration to Temporal
- Key contributor in achieving successful SOC 2 and HIPAA compliance audit through hardening of infrastructure and compliance efforts
- Owned production support channels addressing both user-reported issues and automated alerts, implementing standardized workflows that improved mean time to resolution and customer experience

DevOps Engineer - IBM

May 2022 – October 2024

Durham, NC - IBM Cloud Intern (Remote, 2022), IBM Cloud (2023), IBM Software (2024)

- Built production features across cloud platform tooling, internal services, observability, and infrastructure automation
- Designed Terraform-based infrastructure patterns to standardize deployment workflows across cloud environments and hyperscalers
- Improved service reliability and maintainability through refactoring, stronger test coverage, CI/CD improvements, and internal operational tooling
- Contributed to Kubernetes operator and multi-cloud platform work, including cluster lifecycle management and Azure expansion efforts
- Built an internal RAG-based chatbot to improve onboarding, Q&A, and simplify access to technical documentation

EDUCATION

B.S. Computer Science

Aug 2020 – Apr 2023

University of Pittsburgh - GPA: 3.86/4.00

PROJECTS & OPEN SOURCE

- Creator and maintainer of github.com/jxn1/instructor-go, a Go library for structured LLM outputs and provider-agnostic AI integrations
- Built xlview, a browser-based Excel (XLSX) viewer powered by Rust and WebAssembly
- Additional OSS work and contributions across developer tooling, agent infrastructure, and document/data systems at github.com/h0rv

SKILLS

- **Languages:** Go, Python, JavaScript (Node.js), Terraform, C, Java, Rust, Haskell
- **Technologies:** GNU/Linux, Git, CI/CD (GitHub Actions, Travis), Cloud (AWS, GCP, Azure, IBM Cloud), Databases (PostgreSQL, NoSQL, vector), Containers, Temporal, Kubernetes
