## EXPERIENCE

---

### Senior Software Engineer, AI & Platform - Anatomy Financial

June 2026 – Current

San Francisco, CA (Remote)

- Re-architected the document extraction agent and pipeline while volume grew 40%: 17x faster extraction, 70% lower AI cost per document, and 11x fewer errors
- Redesigned claim-to-payment matching engine, raising the match rate 2.5x
- Improved developer experience with a local dev setup for the whole platform, stricter linting and type checking, and up to 6x faster CI

### Software Engineer - Sweetspot

July 2025 – April 2026

New York, NY (Hybrid) - Early engineering hire at a seed-stage startup

- Built core product capabilities for an AI-native government contracting platform spanning agent workflows, retrieval, document understanding, and chat
- Designed and shipped an AI spreadsheet agent for form-oriented workflows over user office documents
- Created the chat sub-agent architecture linking organization-wide and project-scoped workflows, improving context isolation, recall, and extensibility
- Reworked chat citations and grounding for files, images, and web sources, with source-aware rendering

### DevOps Engineer - Anatomy Financial

October 2024 – July 2025

San Francisco, CA (Remote) - Early engineering hire at a Series A startup

- Improved product quality by streamlining release candidate workflows, developer tooling, and CI/CD
- Drove a culture shift toward robust, observable, and fault-tolerant software via migration to Temporal
- Key contributor to passing SOC 2 and HIPAA audits by hardening infrastructure
- Owned production support channels addressing both user-reported issues and automated alerts, implementing standardized workflows that improved mean time to resolution and customer experience

### DevOps Engineer - IBM

May 2022 – October 2024

Durham, NC - IBM Cloud Intern (Remote, 2022), IBM Cloud (2023), IBM Software (2024)

- Built production features across cloud platform tooling, internal services, observability, and automation
- Designed Terraform infrastructure patterns to standardize deployments across clouds and hyperscalers
- Improved reliability and maintainability through refactoring, test coverage, CI/CD, and operational tooling
- Contributed to a Kubernetes operator for multi-cloud cluster lifecycle management and Azure expansion
- Built an internal RAG-based chatbot to simplify team onboarding

## EDUCATION

---

B.S. Computer Science, University of Pittsburgh (GPA 3.86/4.00)

August 2020 – April 2023

## PROJECTS & OPEN SOURCE

---

- Creator and maintainer of [instructor-go](#) (200+ stars), a Go library for structured LLM outputs across providers
- Built [buquet](#), a distributed task queue and workflow orchestrator in Rust that runs on any S3-compatible bucket, with no database or broker
- Contributor to [Pydantic AI](#), [LangChain](#), [Instructor](#), and more at [github.com/h0rv](https://github.com/h0rv)

## SKILLS

---

- **Languages:** Python, Go, TypeScript, SQL, Zig, Rust, C, Java, Haskell
- **Technologies:** GNU/Linux, Git, CI/CD (GitHub Actions, Travis), Cloud (AWS, GCP, Azure), Terraform, Temporal, Databases (PostgreSQL, NoSQL, vector), Containers, Kubernetes, Datadog
